Albert Einstein

Albert Einstein was born in Wurttemberg, Germany. He was born on March 14, 1879 to a middle-class German Jewish family. He was a top student in school. He had trouble concentrating on boring school work. He moved from Germany to the United States because the Nazis were overpowering the Allies.

Albert Einstein tried to get rid of nuclear weapons. He was part of civil rights groups. He opposed the Nazis. He supported the state of Israel.

He got the Nobel Peace Prize in Physics in 1921 and in 1999 was awarded Person of the Century by Time Magazine. I knew he worked on the atomic bomb and I wanted to learn more about him. I liked how he worked on the atomic bomb but then regretted it.

He died on April 18, 1955.

“Peace cannot be kept by force; it can only be achieved through understanding.”
